

MedShare

2025 IMPACTREPORT

Strengthening the Healthcare Safety Net Across the US

Last year, thanks to the generosity of longtime partner BD, MedShare delivered 92 new portable ultrasound machines to 80 free and charitable clinics across 30 states—the largest single domestic medical equipment donation in our history.

Over the past year, these machines have transformed care by equipping clinics with critical diagnostic tools to expand prenatal services for women who might otherwise lack access to care. Most importantly, this sustainable investment will continue improving health outcomes in at-risk communities for years to come.

Clean Birthing Kits & BabySafe Emergency Kits Distributed

Ensuring safer birth environments in high-risk settings for expectant mothers in developing countries & providing a measure of support for mothers in crisis in the US

948,922

Patient Visits Enabled

Based upon the average cost for a charitable provider to procure basic medical supplies and specialized equipment

Bolstering Disaster Readiness Through Innovative Partnership

Year-round support for MedShare's disaster preparedness efforts was strengthened by a two-year disaster readiness pilot launched with Philips and the Philips Foundation. Designed as a model for future expansion, the pilot focuses on reusing donated medical equipment by returning devices to MedShare for reprocessing and redeployment after each emergency.

This approach maximizes the impact of each biomedical device while setting a new standard for sustainable, environmentally responsible disaster response.

\$5.1 million in Humanitarian Aid

Delivered to Charitable Healthcare Providers in 40 Countries

Advancing Maternal & Child Health Access Internationally

MedShare is approaching a historic milestone with the final 10 container shipments of life-saving medical supplies and biomedical equipment to charitable hospitals in Nigeria and Côte d'Ivoire—regions that have long faced some of the world's highest maternal and infant mortality rates.

These shipments mark the culmination of the 10-year Safe Birth Initiative (SBI), an innovative collaboration that has seen over \$50 million of medical supplies, equipment and biomedical training impact healthcare in the region. While significant challenges remain, both countries have achieved measurable improvements in both maternal and child health outcomes.

123 Technicians & Physicians

Trained in '25 in conjunction with MedShare's donation of 90 ultrasound units to 80 free & charitable clinics in 30 states in the U.S.

Equipping Healthcare Professionals on a Mission

Access to care often comes down to a simple but critical question: can the right tools and resources reach the people who need them, when they need them most?

Thankfully, medical professionals from all over the country volunteer to ensure that vulnerable communities do not go without. By acquiring donated resources from MedShare, they are able to personally and cost-effectively transport carefully packed equipment and supplies – placing them directly into the hands of clinicians and care teams, and bridging gaps that can delay or limit access to care in communities where resources are stretched.
